'earthquake seismology i

May 29th, 2020 - seismic ray theory when seismic rays travel through the earth they encounter changes in k g and ? this causes the rays to be reflected and refracted when seismic energy travels it ideally would do so in an approximately spherical way the energy at the wave front gets weaker as it moves from its source"s wave

May 13th, 2020 - the name secondary wave es from the fact that they are the second type of wave to be detected by an earthquake seismogram after the pressional primary wave or p wave because s waves travel slower in rock unlike p waves s waves cannot travel through the molten outer core of the earth and this causes a shadow zone for s waves opposite to their origin'

'chapter 1 7 1 general theory of elastic wave scattering

May 25th, 2020 - general theory of elastic wave scattering 531 transverse waves the polarisation of these waves is indicated by the arrows in fig 2 longitudinal waves propagate at a higher velocity than do the transverse waves the nomenclature p wave and s waves historically denotes the ?rst arriving primary and later arriving secondary'
