May 29th, 2020 - directly modeling an orbit can push the limits of machine precision due to the
need to model small perturbations to very large orbits because of this perturbation methods are
often used to model the orbit in order to achieve better accuracy orbit models are typically
propagated in time and space using special perturbation methods'

May 31st, 2020 - each satellite rotates into the farthest point from earth where it spends about 8 hours the satellite obeys kepler s second law of planetary motion so the speed at this point is low if the period of the satellite is set just right the satellite will appear relatively motionless during this period hohmann transfer orbit opportunities'

'orbit modeling

May 31st, 2020 - orbit modeling is the process of creating mathematical models to simulate motion of a massive body as it moves in orbit around another massive body due to gravity other forces such as gravitational attraction from tertiary bodies air resistance solar pressure or thrust from a propulsion system are typically modeled as secondary effects directly modeling an orbit can push the limits of'
