'observing the planets
with color filters

June 4th, 2020 -
introduction a set of
photo visual color
filters is an
important observing

aid that every planetary astronomer should have color filters help overcome image deterioration caused by atmospheric scattering of light permits separation of light from different levels in a planetary atmosphere increases

hue contrast between
areas of differing
color and reduces
irradiation within the
observer's eye'

**'a solar observing
refresher course sky
amp telescope**

*May 25th, 2020 - solar
filters are typically*

made with a specially coated mylar or glass substrate mounted in a cell that fits snugly over the front of the telescope such filters offer safe white light views of the sun revealing sunspots faculae limb darkening and a host of lesser

features sky amp
telescope photo by
craig michael
utter''**how to**
photograph a solar
eclipse b amp h
explora

June 4th, 2020 - the
sun is beyond bright
so when photographing
the partial phases of

an eclipse you don't technically need a camera support to avoid camera shake because your shutter speeds will be very short however during totality the sun is blocked out which basically means that you are photographing

in darkness'

**'hydrogen alpha solar
