'PDF Time structure of gamma ray signals generated in

November 15th, 2019 - Blazars are expected to produce both gamma rays and cosmic rays Therefore observed high energy gamma rays from distant blazars may contain a significant contribution from secondary gamma rays produced along the line of sight by the interactions of cosmic ray protons with background photons"Neutrino spectra from low and high luminosity populations

December 21st, 2019 - High energy protons and electrons can produce high energy neutrinos and gamma rays Discussed are possibilities of such high energy emission from GRBs In particular the focus is on high energy neutrinos as a probe of proton acceleration and delayed secondary gamma rays that are produced when high energy gamma rays from GRBs propagate in the universe'
