matroid representation

October 12th, 2019 - in the mathematical
theory of matroids a matroid representation is
a family of vectors whose linear independence
relation is the same as that of a given
matroid matroid representations are analogous
to group representations both types of
representation provide abstract algebraic
structures matroids and groups respectively
with concrete descriptions in terms of linear
algebra'

'dual matroid

May 19th, 2020 - in matroid theory the dual of
a matroid is another matroid that has the same
elements as and in which a set is independent
if and only if has a basis set disjoint from
it matroid duals go back to the original paper
by hassler whitney defining matroids they
generalize to matroids the notions of plane
graph duality''**matroid theory oxford graduate

'regular matroid

May 15th, 2020 - definition a matroid is defined to be a family of subsets of a finite set satisfying certain axioms the sets in the family are called independent sets one of the ways of constructing a matroid is to select a finite set of vectors in a vector space and to define a subset of the vectors to be independent in the matroid when it is linearly independent in the vector space'

oxford and his graduate work at the university
of pennsylvania and mit'

'**matroid rank**

June 2nd, 2020 - in the mathematical theory of
matroids the rank of a matroid is the maximum
size of an independent set in the matroid the
rank of a subset s of elements of the matroid
is similarly the maximum size of an
independent subset of s and the rank function
of the matroid maps sets of elements to their
ranks the rank function is one of the
fundamental concepts of matroid theory via
which'
