'phonocardiogram signal precision using sound repetition

April 28th, 2020 - vector quantization has reduced the prd by at least half from 10.1 to 4.89 in the case of a normal heart sound and from 23.9 to 4.88 in the case of aortic regurgitation we conclude that vq has more advantage to reduce the prd than the creation of a larger dictionary and thus bees a viable alternative in all situations where the operator needs or wants a high cr and can tolerate a prd'
